

Senior Software Developer - My Way Digital Health

Who we are?

MyWay Digital Health (MWDH) is an ambitious, rapidly expanding digital health company with a goal to improve the lives of people living with diabetes through our data-driven, award winning MyDiabetesMyWay self-management platform.

We are looking to transform diabetes care globally, delivering knowledge and advice to patients and health-care professionals thereby improving care quality, saving lives, and saving money. Life at MWDH is challenging and rewarding! [check out more at mywaydigitalhealth.co.uk]

The candidate:

Your core skill set and experience is software engineering. You will work as part of our growing technical team, who are responsible for collaboratively designing new platforms and features, as well as supporting our existing product set.

We are looking for someone who wants to bring their extensive technical knowledge to ensure that we are designing and delivering high quality products efficiently, mentoring more junior staff and suggest improvements to our development and delivery processes.

Key attributes include:

- A passion for helping people professionally
- Communication and organisational skills
- Software quality
- Designing systems
- Working in teams

Tasks will include but not be limited to:

- Hands-on programming tasks relating to our award-winning diabetes platform, comprising web application, database, web services and mobile app, primarily based on the Microsoft technology stack.
- Implementation, maintenance and management of agile processes, and following industry best practices. Participating in the full development life cycle from the receipt of requirements, through bug and issue resolution to software release and maintenance.
- Working as part of a skilled team, currently comprising 5 developers plus our Development Lead, with plans to expand in the coming months.

Required Job Skills:

- Good degree in computing or relevant discipline
- Experience in working in an agile environment that is successfully using Test-Driven Development
- Evidence of your role in the planning, development, testing, implementation, maintenance, support and system/help documentation relating to an IT system with a large user base
- 5+ years' experience, including most/all of the following:
 - .NET & C#
 - Azure
 - SQL Server & Entity Framework
 - Building web services including RESTful design
 - Unit testing (e.g. Unit, MSTest, Moq)
 - Source Control Systems (e.g. Git, TFS)
 - Agile processes
 - Test Driven Development
 - Designing multi-service solutions and n-tier web applications

Personal Attributes:

- Positive outlook & motivated
- Proactive & flexible
- Keen to make a difference
- Take ownership of tasks & pride in your work
- Interested in mentoring more junior staff and educating the team
- Able to work independently or as part of a team
- Comfortable multi-tasking
- Excellent inter-personal skills
- A strong commitment to exceptional client service
- Aptitude for detail, accuracy, problem solving and process improvement
- Ability to define problems, collect data, establish facts, and draw valid conclusions

We offer a competitive salary in this full-time role that will be work from home during the Covid crisis. Longer term we expect people to split their time working from our Edinburgh Office and working from home.
